

EXPERIMENT 24:

The image displays two screenshots of the Weka Explorer application, illustrating the configuration and execution of the HierarchicalClusterer.

Top Screenshot: The 'Cluster' tab is active. The 'Clusterer' dropdown is set to 'HierarchicalClusterer -N 2 -L SINGLE -P -A "weka.core.EuclideanDistance -R first-last"'. The 'Cluster mode' section shows 'Use training set' selected. The 'Store clusters for visualization' checkbox is checked. The 'Cluster output' pane displays the following information:

```
==== Run information ====
Scheme:      weka.clusterers.HierarchicalClusterer -N 2 -L SINGLE -P -A "weka.core.EuclideanDistance -R first-last"
Relation:    iris
Instances:   150
Attributes:  5
              sepallength
              sepalwidth
              petallength
              petalwidth
Ignored:     class
Test mode:   evaluate on training data

==== Clustering model (full training set) ====

Cluster 0
{(((((0.2:0.03254,0.2:0.03254):0.00913,(0.3:0.03254,0.3:0.03254):0.00913):0.00332,((0.2:0.02778,0.2:0.02778)

Cluster 1
{(((((1.4:0.07344,((1.5:0.06508,1.5:0.06508):0.00066,(1.4:0.05008,1.4:0.05008):0.01566):0.00224,1.3

Time taken to build model (full training data) : 0.04 seconds

==== Model and evaluation on training set ====
```

Bottom Screenshot: The same configuration is shown, but a dialog box titled 'weka.gui.GenericObjectEditor' is open, allowing editing of the 'Hierarchical clustering class'. The dialog shows the 'debug' checkbox is unchecked, 'distanceFunction' is set to 'EuclideanDistance -R first-last', 'linkType' is 'SINGLE', and 'numClusters' is '2'. The 'Sets the number of clusters' checkbox is checked. The 'Cluster output' pane shows the same information as the top screenshot.
