

EXPERIMENT 13:

The screenshot shows an R Studio window with a script editor and a console. The script editor window is titled "C:\Users\trish\OneDrive\Documents\exp13.R - R Editor" and contains the following R code:

```
library(readxl)

# Replace with the exact path to your Excel file
diabetest1 <- read_excel("C:/Users/trish/OneDrive/Desktop/capstones/CSA1603-DWDM/

# Extract Age vector
A <- c(diabetest1$Age)

# 1. MEAN
Mean <- mean(A)
print(paste("Mean:", Mean))

# 2. MINIMUM
Minimum <- min(diabetest1$Age)
print(paste("Minimum:", Minimum))

# 3. MAXIMUM
Maximum <- max(diabetest1$Age)
print(paste("Maximum:", Maximum))

# 4. MIN-MAX NORMALIZATION: (A - min) / (max - min)
MinMax <- (A - Minimum) / (Maximum - Minimum)
print("MinMax Normalized Values:")
print(MinMax)
```

The console window shows the output of the script. It starts with the R version and copyright information, followed by a message that the workspace was restored. Then, it shows an error message: "Error: 'path' does not exist: 'C:/Users/trish/OneDrive/Desktop/capstones/CSA1603-DWDM/NARA.xlsx'". After this, it shows the output of the script, which includes the mean, minimum, maximum, and min-max normalized values of the 'Age' variable.
